

ABSTRACT OF THE DISCLOSURE

A display system for a vehicle, which presents menu items corresponding to functions of vehicle mounted devices/equipment, displaying operation menus including some of the menu items on a screen, and allows a user to select one of the functions of vehicle mounted devices/equipment. The system includes: an input unit; an operatability judgment unit which judges user's operatability of the input unit; a storage unit which stores hierarchically structured first menu information; and a display control unit. The first menu information includes a plurality of the operation menus respectively registered in a plurality of tiers thereof. The display control unit determines the operation menu for displaying, based upon the operatability of the user, using the first menu information or a second menu information having a limited number of tiers as compared with the first menu information.
